

## Educational Non-profit Seeks Help with Website

Items in blue are immediate needs.

EYEWITNESS is a new educational program under the umbrella of Global Community College, a California 501(c)3 corporation. Our program pairs individuals born in the twentieth century with classrooms who are studying various aspects of that century's history, socio-economic conditions, political and cultural change, and other areas of study. The presenter and the classroom engage in a live, interactive session using Skype.

We are actively seeking assistance in several areas of website management:

- a. **Adding the EYEWITNESS page onto the existing Global Community College (GCC) site**
- b. **Updating all areas of the GCC site as per Dr. Craig Zachlod\***
- c. Provide insight and support on possible redesign of the site in future
- d. Add Google analytics to the site. This is a wish-list item that needs eventually to be added.
- e. In the near future, perhaps a six-panel animation on the home page.

-The site content is currently static.

-It is based on a WordPress template.

-The site includes forms that on completion forward to the GCC office.

-The possibility of embedding links to YouTube videos (from EYEWITNESS presentations) is on the table; we are in the early stages of planning. We are recording some but not all of the interviews but to preserve reasonable bandwidth for the site, they would link to YouTube.

-We will **not** include real-time conferencing in our pilot year.

- We want to for viewers to be able to access approximately four of our questionnaires from our page on the site. Best case for us would be a fillable form that could be completed by viewers and sent to one of our mailboxes directly from the site, but this is not essential.

- We are now organizing fundraising efforts but have no funding at present. Expert volunteer help would be much appreciated. We are seeking funding for speakers and support staff; i.e., site assistance. While we raise money, we would be very happy to include SF State's Department of Computer Science in all publicity about EYEWITNESS as an integral component of its success.

Dr. Zachlod is compiling a list of tasks that he is seeking assistance for the site, but would like to speak with Dr. Hsu soon.
